

ROUND MECHANICAL TIMER

Old school meets new style with the CDN easy-view Round Mechanical Timer (MTR). It stands out for the artistry of its modern look and for its easy-view functionality, with the time clearly visible on the top as well as the side.

Featuring a stainless steel top and white, black, silver or red base, this mechanical timer offers all the ease of use of a traditional mechanical timer. There are no buttons to press, just a top to be turned. It's easy to set, easy to see, and easy to hear the alarm when the set time is finished.

What sets this apart from traditional mechanical timers is its clean lines and quality craftsmanship and design. A window at the top shows the number of minutes left, information that is also clearly visible on the side.

With a diameter of 2.5 inches, the Round Mechanical Timer (MTR) counts down by minute up to an hour, and features a loud 3-second alarm.

FEATURES

- Counts down
- Top & side display
- Long 3-sec alarm
