

## FLOATING THERMOMETER

A variety of culinary projects hinge on the ability to keep a liquid at just the right temperature — from brewing beer to baking a delectable cheesecake in a water bath. The CDN Floating Thermometer (FT220) makes it easy to accurately measure liquid temperatures because of its reliable technology, intuitive operation, and ability to float.

This specialty thermometer is the perfect companion for best results for sous-vide cooking or any recipe requiring a water bath. A water bath, or “bain-marie,” enhances the baking of custards and cheesecakes by ensuring that the center is done before the edges dry out. For brewing beer, water baths are used to improve beer taste by controlling the temperature of the fermentation process. This multipurpose floating thermometer will also come in handy for sauces, soups and stews.

Totally waterproof, the Floating Thermometer features the quality construction for which CDN is known, with a sturdy shatterproof lens and 304 stainless steel housing. It is enclosed in a stay-cool buoy that floats on the surface of a liquid and is removable for easy cleaning.

### FEATURES

- Multi-purpose: sous-vide, custards, brewing beer, sauces, soups and stews
- Waterproof (IPX6)
- Safe for commercial dishwashers
- Shatterproof lens
- 304 stainless steel housing
- Removable buoy
